

QC Bot™

One Robot, Many Uses™

QC Bot is a hospital courier, tele-presence and patient self-service robot that improves efficiency, reduces medical errors, and increases patient and staff satisfaction. QC Bot integrates with your hospital's IT systems and with Vecna's QualityCare software suite (QC Works™). A configurable touchscreen lets hospital staff and patients interact with the robot through natural, intuitive menus and workflows. QC Bot's state-of-the-art guidance system means less set up time, less maintenance, and more robust navigation in complex hospitals campuses, both indoors and out.

Secure Automated Delivery

Each QC Bot's location and status is available on workstations, smart phones and mobile. Call a QC Bot, place items in its locking drawers and indicate the recipient with a click of a button. QC Bot reduces medical errors by verifying medications and patient and provider identities through biometrics, ID cards, barcodes or RFID, helping to ensure the right treatment gets to the right patient at the right time. A configurable payload area is available to transport laundry, packages, meals, mail, supplies, trash, and more. The QC Bot is even capable of towing additional payloads.

Telepresence Where You Need It

QC Bot incorporates state of the art video conferencing capabilities allowing for virtual presence which can significantly reduce the time staff spends traveling from one wing to the other for a quick consult. The patient and nurse can be connected directly to the pharmacist right at the point of care when those inevitable medication questions arise. Medical staff in other facilities can remotely control QC Bot and interact with patients and other staff in an easy, natural way.

Mobile Patient Self-Service

The QC Bot can provide value over the whole range of the patient experience, both for outpatient and inpatient significantly enhancing patient satisfaction while simultaneously reducing the load on your staff. QC Bot can be used to guide patients through check-in and registration and show them to their appointment. QC Bot can bring an inpatient an approved snack item allowing staff to focus on more critical services. QC Bot can be used for completing bedside registration and vitals capture and is fully integrated with Vecna's award winning suite of self-service kiosks and portals.
